## PROFILE

I am Besim Çmega, a 20-year-old Junior Software Engineer with three years of freelance experience, and my area of expertise is backend programming. I am in my last semester at UBT, where I am pursuing a Bachelor of Computer Science and Engineering degree. I am proficient in Java, PHP, JavaScript, C#, and C++. I am also knowledgeable about frameworks such as Laravel, Spring Boot, and Express.js. I have a track record of providing clients with high-quality solutions, and I'm committed to lifelong learning and innovation in the dynamic world of software engineering.

## WORK EXPERIENCE

### Freelancer
2021 - PRESENT

I have successfully finished a great deal of work for a wide range of clients over the last three years, including e-commerce websites for a variety of product categories like electronics and apparel, as well as job application platforms. I have also added to projects like marketplace, which has expanded my experience in developing scalable and effective solutions that are customized to meet the demands of certain clients. I've had the chance to work with clients in a variety of industries, adjust to changing technology environments, and continually produce high-caliber software solutions thanks to my freelance employment.

### Projects

I've finished a number of projects in my professional career that highlight my versatility in a variety of technologies. For example, I used Tailwind with Laravel to create Ajkuna-Airlines, which is an efficient airline ticket administration system. I have made the webpage Donate for donations. In addition, I worked on a Restaurant Menu application and created a Java game called Tic-Tac-Toe. I used multithreading for a Java software called Restaurant Structure in another project. Finally, I made a contribution to a Java-developed hotel management system. These projects serve as examples of my skill and adaptability in software development.
